

OnC PressSave More reliability for the press section

Avoid unnecessary outages

Hydraulic stations at modern, new installed Voith shoe presses are equipped with a hydraulic accumulator unit to provide sufficient hydraulic pressure in case of power failure or emergency stop of the press. An easy extension of existing press hydraulics with OnC PressSave allows the increase of paper machine availability.

The potential risk

With a breakdown of the hydraulic supply (power outage, power failure of press hydraulic, etc.) at a conventional press unit, the press slows to a halt without drive. Due to the lack of hydraulic pressure during the slow down, the press sleeve is no longer pressed against the felt with sufficient force. As a result the sleeve might stop, with the felt wearing out the sleeve locally. In many cases the only remedy is the costly replacement of the sleeve.

Protect your press

With the retrofit installation of OnC PressSave, you insure that the contact pressure between sleeve, felt, and roll is kept even by an unexpected breakdown of the press hydraulic. Subsequently deterioration of sleeve and felt during the stopping period is avoided.

OnC PressSave is designed to perfectly fit your hydraulic requirements and is installed during a short typical maintenance shutdown.

Modernization with fast ROI

In addition to OnC PressSave, Voith Paper offers further solutions for the press section. Enhance your press performance with Voith's modernization packages such as an edge relief or OnC PressTech, a complete modernization of the press control.

Single source supply

As a process supplier, Voith Paper offers everything out of one hand. The close cooperation of automation-, process- and roll experts within Voith Paper is the basis for reliable project engineering and grants a save and fast startup.

With Voith Paper, you have just one partner for your modernization project.

VOITH
Engineered reliability.
