

After Market Exchange Program Combisorter™ CSM – Upper Housing Assembly

Upper housing importance

The Combisorter™ is a coarse tailing screen that is capable of deflaking stockwhile simultaneously cleaning and dewatering impurities from recovered fiber systems.

The Combisorter™ upper housing assembly contains components that significantly impact the separation of fibers from contaminants and the dewatering and transportation of rejects out of the machine.

As the components in the upper housing wear, their washing and rejects conveying attributes diminish resulting in decreased production and increased fiber loss.

Our solutions

The Combisorter™ CSM upper housing Assembly provides a means of maintaining the efficiency of your machine while reducing overall operating costs. The following are some of the design improvements incorporated into the latest upper housing assembly:

- Cylinder rotor with integral labyrinth arrangement that prevents material from getting behind rotor drum and ultimately to the shaft and lower bearing.
- Rotating assembly is equipped with brass ring to stabilize cylinder rotor.

Your benefits

- Lower fiber losses and higher production
- More reliable operation
- Voith keeps exchange assembly on hand for quick delivery
- Mill no longer has to inventory a spare
- Exchange assembly conforms to most up-to-date OEM specifications
- Exchange assembly has same warranty as new components
