

Digital & Automation lifecycle report OnQ. QNX System Phase-out

Lifecycle Management

Welcome to the lifecycle management program report, where we unlock the potential for optimal operations. Our mission: minimize downtime, enhance efficiency, boost performance, ensure machine availability, optimize maintenance planning, and streamline spare parts management.

Discover the power of active lifecycle management.

Discontinuation

It's a fact that technology is driving the world forward and we move forward together to bring advanced solutions to maintain and improve your competitive advantage. Although still fully functional, some of the components are becoming obsolete.

We are sure that this early information will give you adequate time to decide what measures to take. We are informing you now about the details of the phase-out plan for:

OnQuality control system "QNX"

Our QCS system is over 20 years on the market, since 2021 we are implementing the new platform ComCore.

The PhaseOut starts on 1st January, 2024, until January 2034 we guarantee full support for QNX systems.

After the phase-out period we do not guarantee the system operation, compatibility and efficiency as well as support service.

Spare parts from sub-supplier must follow their own life-cycle and availability according to each manufacturer.

Components

The following components have an impact on the QCS system and have either been discontinued or are currently being discontinued:

- ⚠ **Siemens Controller - IPC 647D**
- ⚠ **Siemens Controller - IPC 647C**
- ⚠ **Hirschmann Switch - RS20**
- ⚠ **Phoenix Counter Module - IB ST 24 CNT (Rollmaster)**

It is crucial to recognize that the discontinuation of these components in the QCS system can have significant implications for its overall functionality and performance. Therefore, it is highly recommended to consider an upgrade to a more modern and supported solution to address these challenges effectively.

By transitioning to ComCore, you can mitigate the consequences associated with the discontinuation of components in the QCS system and unlock several benefits.

The new Voith Paper automation platform ComCore Next Level

ComCore is the automation platform from Voith Paper specially developed to meet the needs of the paper industry.

It is already setting benchmarks for the digital factory of the future that will have to meet the most stringent requirements for decentralization, cost efficiency and intelligent collection and processing of data.

- 💡 A step to the future, state of the art QCS platform with open interface and architecture for future extensions. Support for future Autonomous machine.
- 💡 Easy and comprising service and diagnostic interfaces with remote access for fast service and optimization.
- 💡 Comprising Automation and process knowledge.
- 💡 Easy to use and user friendly experience.

**ComCore™**

The system upgrade that takes you to the next level.

Unlimited connectivity with Papermaking 4.0

Scalable

The upgrade to ComCore system offers a range of benefits. Its scalable system architecture allows for future growth and expansion. With the always up-to-date version, you have access to the latest features and improvements, ensuring your system stays competitive in the market.

Cyber secure

ComCore is built with a strong focus on cybersecurity, providing advanced security measures to protect your data and network from threats. The system also offers automatic patching and updating, minimizing the risk of vulnerabilities and ensuring that your system remains secure.

Modular

ComCore is also modular and smart, allowing for easy customization and integration with other technologies. Its modular design enables you to adapt and expand the system based on your specific needs and ensuring flexibility.

Stable

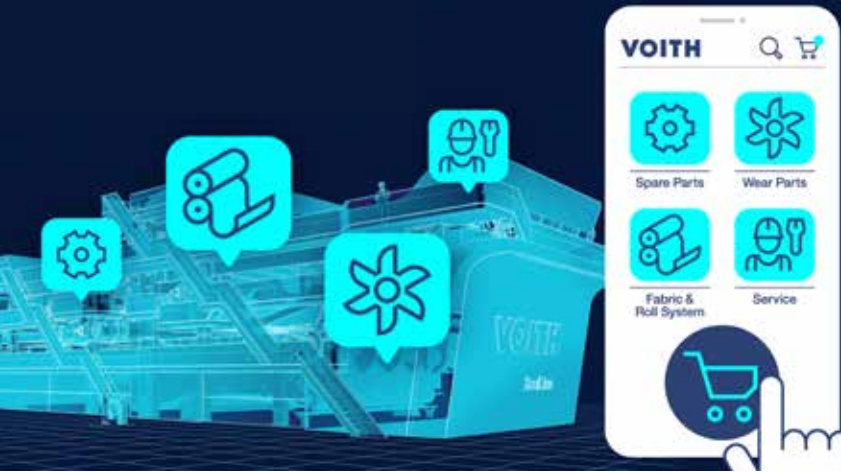

In terms of system stability and high availability, ComCore excels. It is designed to provide reliable and uninterrupted performance, reducing downtime and maximizing productivity. The modern system architecture of ComCore enables efficient processing and faster response times, optimizing system performance.

Our Service -
Part of Your Business.

Solutions

Modular upgrades

ComCore

The software upgrade includes ComCore software, remote installation, system migration, compatibility check, and a one-year service contract. Enjoy hassle-free upgrades and expert support.

New IPC hardware Upgrade Virtual System *VMWare

Includes hardware (for new IPC) and remote installation support. If you have a virtual server, we provide Comcore installed in a virtual machine with the latest update.

Upgrade VAM Rack serial link to TCP/IP.

Used for CD actuators the upgrade Incl. New master card, new TCP-IP switch, remote software update and setup to latest version, electrical design, optical link module NOT Incl. cable and installation.

ComCore annual service.

The ComCore annual service contract includes regular upgrades, security patches, and remote support. Ensure optimal performance, stay protected, and receive dedicated assistance with our comprehensive service package.

Virtual system

Discover the power of system virtualization with our host server solution. Enjoy a sustainable and lifecycle-managed infrastructure that eliminates hardware dependency. Say goodbye to worries about hardware discontinuation. With one-time investment, experience a powerful virtual system that brings numerous benefits over traditional hardware PCs. Maximize efficiency, scalability, and cost savings. Upgrade to virtualization and unlock a world of possibilities.

Custom upgrade

Request a custom upgrade tailored to your specific needs. Our personalized solution is designed to cater to your unique requirements. Experience a fully customized upgrade that aligns perfectly with your business goals. Upgrade with confidence and achieve maximum efficiency.

Maximize your system's
potential.
