

Dryer fabric - fine spiral design for clean running

MultiTech LBR

We provide fabrics, roll covers, doctor blades, services and integrated solutions to improve productivity, running costs and quality as a trusted partner to the pulp and paper industry.

MultiTech LBR is a seamless spiral dryer fabric for all grades of paper machines and mark sensitive papers. The addition of PTFE allows ease of cleaning.

The spiral fabric seam is identical to the body of the fabric. No risk of seam mark or preferential surface wear.

Your Advantages

Superior resistance to wear

- 0.55mm diameter monofilament spirals for high wear resistance.

Effective ventilation and moisture evaporation

- high contact area for improved heat transfer.
- excellent permeability retention improves drying rate.

Fine spiral design

- Fine spiral provides excellent sheet support and smooth, non marking surface.
- The LBR Spiral surface is level and uniform for effective heat transfer and steam usage.
- Ease of cleaning with LBR due to PTFE additives.

Non marking

- Polishing available for improved sheet contact.

Fine spiral design

Fabric life

- High resistance to wear due to the large diameter monofilament spirals.
- Excellent permeability retention and ease of cleaning due to the addition of contaminant release additives.
- Spiral fabrics can be repaired to extend the life of the fabric.

Drying efficiency

- Improved heat transfer is given by the high contact area.
- Increased ventilation from a wide range of permeabilities up to 950cfm (15,200m²m³hr).

Seamless

- The seam is identical to the fabric body for non-marking and integral strength.

Smoother surface

- Polishing available for improved sheet contact.

Resistance to wear

Sheet runnability & effective ventilation

MultiTech LBR

Spiral Monofilament

Material	PET (4% PTFE)
Colour	Red
Dimension	0.55 mm

CMD Hinge Wires

Material	PET
Colour	White
Dimension	0.90 mm

Stuffer Monofil

Material	PET
Colour	Flat Red
